<p>in that (1) the catalyst contains iron and molybdenum. D1 provides no details relating to the composition of the catalyst. The subject matter of claim 1 also differs from that of D1 in that (2) formaldehyde is produced by gas phase oxidation of methanol vapour with oxygen. D1 also provides no details relating to the exact way in which the formaldehyde is produced.</p> <p>2.3 Inventive step</p> <p>The applicant is advised that (1) iron-molybdenum catalysts are already known in connection with the production of formaldehyde by gas phase oxidation of methanol vapour with oxygen (see D4, International Search Report). Also, with regard to (2), documents D1, D2 and D3 describe catalytic fixed beds with plate heat exchangers (see D2 and D3, International Search Report). These devices are used for exothermic reactions, for example to avoid the disadvantages of tubular reactors (hot spots), and can guarantee isothermal reaction conditions. The use of plate heat exchangers is generally known for exothermic reactions. A person skilled in the art wishing to avoid the disadvantages of tubular reactors (see the present application, page 3, lines 10 to 40) would therefore use plate heat exchangers.</p> <p>The applicant is further advised that although the drawings in D1 show only a single plate, it is clear to a person skilled in the art that there is a plurality of parallel plates (see D1, page 1, lines 17 to 21). The term "plate exchangers" on page 1 of D1 (line 19) refers of course not to a single plate but</p>

to a plurality of plates distributed within the catalytic bed, which prevent the formation of hot spots and allow better temperature control.

The applicant is also advised that claim 1 does not exclude plate heat exchangers with **two** heat exchange mediums (claim 1: "through which a heat exchange medium flows" does not mean that there must be **only** one heat exchange medium).

An inventive step cannot therefore be acknowledged (PCT Article 33(3)).

- 2.4 Claims 2 to 18 do not contain any features that meet the PCT requirements in respect of inventive step. The features specified in these claims either are known from documents D1 to D4 or are standard features.
